

The chart displays wave height data and a forecast accuracy scale. The y-axis represents wave height in feet, ranging from 0 to 14. The x-axis shows dates from Tuesday, May 6, to Friday, May 16, 2017. A vertical red line at May 7 marks the start of the forecast period. The forecast accuracy scale is as follows:

- Excellent (Green)
- Very Good (Light Green)
- Good (Blue)
- Fair (Purple)
- Poor (Red)
- Unknown (Dark Red)

Wave heights start around 6 feet on May 6, rise to a peak of about 13 feet on May 13-14, and then decrease to around 8.5 feet by May 16. The forecast accuracy transitions from Excellent to Unknown over the period shown.
