

The graph displays the wave height recorded by a buoy over a five-day period. The vertical axis represents wave height in meters, ranging from 0 to 2.5 with major ticks every 0.5 units. The horizontal axis represents time, with labels for 06/30, 07/01, 07/02, 07/03, 07/04, and 07/05. The data series, labeled 'Buoy', shows a highly variable wave height. It begins at approximately 2.1 m on 06/30, reaches a peak of about 2.3 m, and then fluctuates significantly. By 07/02, the height is around 1.4 m, and it continues to decrease with more frequent oscillations, eventually stabilizing at approximately 1.0 m by 07/04.
