

The chart displays wave height (Hs) in meters on the y-axis (0 to 4) against time on the x-axis. The x-axis is labeled with days of the week and dates from Sat 05-Jul to Tue 15-Jul. A red vertical line is positioned at the start of Sunday, July 6, labeled 'row'. The bars are colored green, indicating 'Excellent' forecast accuracy. The legend on the right shows the forecast accuracy scale: Excellent (green), Very Good (purple), Good (blue), Poor (orange), Noise (red), and Unknown (grey). The wave height shows a significant peak around Sunday, July 6, reaching approximately 4 meters, followed by a period of lower wave heights, and then a sharp increase starting around Thursday, July 10, peaking again around Saturday, July 12, at nearly 4 meters.
