

Figure 10 consists of two vertically stacked bar charts sharing a common x-axis representing time from Tuesday, 08-Jul to Thursday, 24-Jul. The top chart displays wave height in meters (0 to 25), while the bottom chart displays wave height in feet (0 to 5). Both charts use color-coded bars to represent forecast accuracy: green for 'Excellent', purple for 'Very Good', blue for 'Good', yellow for 'Poor', and red for 'Noise'. Vertical dashed lines indicate forecast boundaries. Arrows at the top of each chart point to specific time points. The top chart shows a significant increase in wave height starting around Sunday, 12-Jul, reaching a peak of over 20 meters. The bottom chart shows a similar trend, with wave height increasing from around 2 feet to over 4 feet during the same period.
