

The graph displays the wave height in meters over a five-day period. The observed data (Buoy) shows a significant peak of 1.8 m on 09/01, which is not fully captured by the CMEMS forecast. The forecast peaks at approximately 1.6 m on 09/02. The observed data shows a sharp drop in wave height on 09/03, followed by a recovery and then a decline. The CMEMS forecast follows the general trend but overestimates the wave height on 09/03 and 09/04.

Date	Buoy (m)	CMEMS (m)
08/31	0.5	0.5
09/01	1.8	1.6
09/02	1.0	1.6
09/03	0.4	0.8
09/04	0.4	0.8
09/05	0.3	0.8
