

The chart displays wave height data over a 10-day period. The y-axis represents wave height in feet, ranging from 0 to 10. The x-axis shows dates from Friday, September 5th to Monday, September 15th. A vertical red line at the start of September 6th indicates the 'now' position. The bars are colored based on forecast accuracy: green for 'Excellent', purple for 'Very Good', blue for 'Good', orange for 'Poor', red for 'Noise', and grey for 'Unknown'. The wave heights show a general upward trend, starting around 5.5 ft and peaking at approximately 7.8 ft by the end of the period.
