

The chart displays wave height (ft) on the left y-axis and wind speed (kts) on the right y-axis. The x-axis represents time from Tuesday, October 14 to Friday, October 24. A red vertical line at Wednesday, October 15, indicates the start of the 'No Wind Speed Data' period. Wave height bars are color-coded by forecast skill: Excellent (green), Very Good (blue), Good (purple), Poor (yellow), Noise (red), and Unknown (brown). Arrows indicate the direction of data flow between the two axes.
