

The graph displays wave height data from a buoy. The wave height starts around 0.4 m on 12/11, rises to a peak of about 1.7 m on 12/11, then drops to a minimum of about 0.2 m on 12/13. It remains low until 12/14, then rises sharply to a major peak of approximately 3.0 m on 12/15. Following this peak, the wave height decreases steadily, reaching about 0.7 m by 12/17 and remaining relatively stable through 12/18.
