

The chart displays wave height data and forecast accuracy over a period from Friday, December 19th, to Monday, December 29th. The y-axis represents wave height in feet, ranging from 0 to 5. The x-axis shows the dates. A red line indicates the 'Now' wave height, which is only visible on Friday, December 19th, at approximately 4.5 feet. The bars represent the forecast accuracy, color-coded according to the legend: Excellent (green), Very Good (blue), Good (purple), Poor (yellow), Noise (red), and Unknown (grey). The forecast accuracy starts with 'Very Good' (blue) on Friday, December 19th, and transitions through 'Good' (purple) on Monday, December 22nd, 'Poor' (yellow) on Thursday, December 25th, and 'Noise' (red) on Friday, December 26th, continuing through Monday, December 29th.
