

The chart displays forecast accuracy over a period from December 25 to January 10. The y-axis represents the accuracy level, ranging from 0 to 7. The x-axis shows the dates. A red vertical line at the start of the forecast (Dec 25) indicates the beginning of the data series. The bars are color-coded according to the forecast accuracy: red for 'Noisy', orange for 'Poor', yellow for 'Good', green for 'Very Good', and blue for 'Excellent'. The chart shows a transition from 'Noisy' and 'Poor' to 'Good' and 'Very Good' as the forecast progresses.
