

The graph displays wave height in meters on the y-axis (0 to 3.5) against dates on the x-axis (12/20 to 01/11). The 'Buoy' data (black line) is highly volatile, with peaks reaching up to 3.1m. The 'Forecast' (magenta line) is a smoothed curve that follows the general trend of the buoy data, starting at approximately 2.5m on 12/27 and ending at approximately 1.7m on 01/10. A legend in the bottom right corner identifies the two data series.
