

The chart displays wave height in meters on the y-axis (0 to 10) against time on the x-axis (Jan 11 to Jan 20, 2020). The background is color-coded by forecast accuracy: Noise (red), Very Good (blue), Good (purple), Poor (orange), and Excellent (green). Vertical dotted lines separate these regions. A prominent red vertical line is at the start of the 'Noise' region. Wave heights are highest in the 'Noise' and 'Very Good' regions, peaking around 9m, and decrease as the forecast accuracy improves towards the 'Excellent' region, where heights are mostly between 3m and 4m.
