

Figure 1 consists of two stacked bar charts sharing a common x-axis representing time from Sunday, May 4 to Monday, May 19. The top chart shows Wind Speed in knots (kts) on the y-axis, ranging from 0 to 30. The bottom chart shows Wave Height in feet (ft) on the y-axis, ranging from 0 to 15. Both charts use blue bars to represent data. A red vertical line is drawn at the start of the data on Sunday, May 4. The charts show a significant increase in both wind speed and wave height starting around May 8, peaking on May 9, and then gradually subsiding. A red vertical line marks the start of the data on Sunday, May 4.
