

The figure displays four meteorological variables over a six-day period from Tuesday, November 25, to Sunday, November 30, 2019. The variables are Surface Pressure (mb), Air Temperature (°C), Relative Humidity (%), and Cloud Cover (%). The data is presented in four stacked bar charts, each with a y-axis label and a scale. The x-axis for all panels shows dates from Tue 25-Nov to Sun 30-Nov. Vertical dotted lines separate the data by day.

- Surface Pressure (mb):** The y-axis ranges from 1010 to 1015. Values generally fluctuate between 1010.5 and 1014.5 mb.
- Air Temperature (°C):** The y-axis ranges from 26 to 30. Values fluctuate between approximately 27°C and 28.5°C.
- Relative Humidity (%):** The y-axis ranges from 50 to 100. Values are consistently high, mostly between 75% and 90%.
- Cloud Cover (%):** The y-axis ranges from 0 to 100. Values are mostly at 100%, with some days showing lower coverage (e.g., ~50% on Sat 29-Nov and ~10% on Sun 30-Nov).
