

Figure 1 is a contour plot showing the surface pressure (mb) over the West African region, specifically between 2°N and 6°N latitude and 7°W and 3.5°E longitude. The plot displays a low-pressure system (cyclone) centered around 4.5°N, 5.5°E, with a minimum pressure of 1011.3 mb. The pressure increases towards the north and south. The map includes latitude and longitude axes, a color scale for surface pressure, and a title 'CSA (ONHYM) PPL EBS - Cote d'Ivoire'.
